

Visual Inspection

Aided Visual Inspection Equipment

This equipment is designed to perform visual inspection of Vials, Bottles, Ampoules & Syringes and Cartridges with the aid of a high resolution camera and touch screen display.

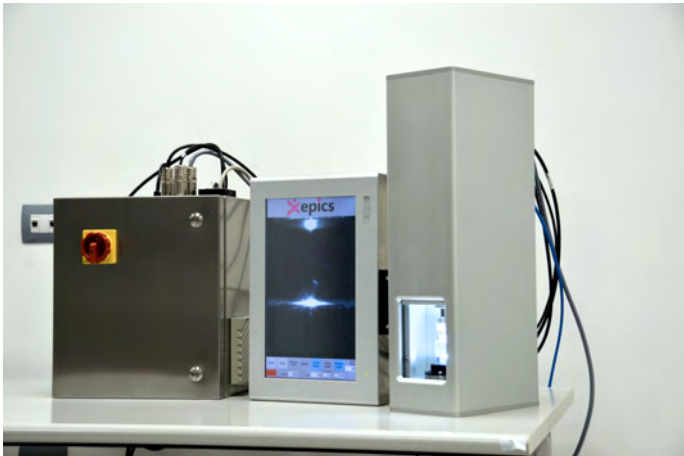

VS X is suitable to handle a wide range of container types and sizes.

The container can be loaded either by an operator, a teleplier or optionally by a robot arm.

The equipment can record the video of the inspection process.

Product and container range: Liquid, Lyophilized, Powder and Empty Containers

VS X

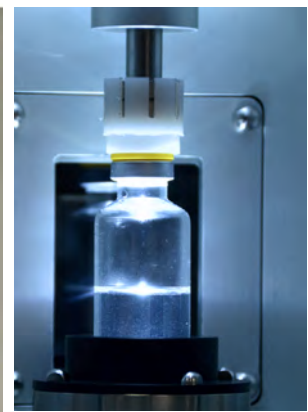

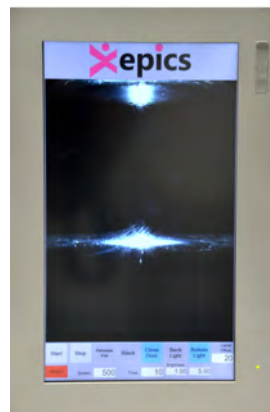

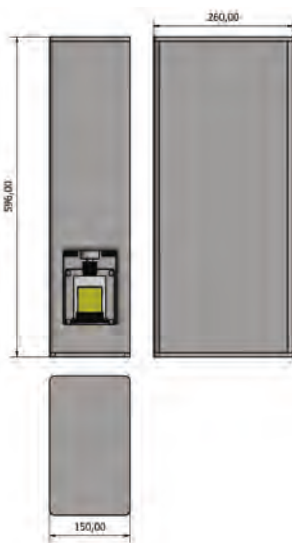

Key Benefits

- Back light, front light and bottom light (Tyndall) configurable systems
- A standard environment is ensured by closing the automatic guard prior to the inspection
- It can be used to inspect containers inside isolators (highly potent or radioactive products)
- Software system to manage inspection sessions and to create reports is available

Relevant Features

- Suitable for inspection of vials, ampoules, cartridges syringes, bottles
- Wide range of container sizes: diameter [8-52]mm, height up to 100mm
- Reject classification: 4-6 categories
- High Quality Components: all parts used in VS X pass strict quality control tests, ensuring a long lifespan, even with 24/7 use
- Quick container size changeover
- Extremely Compact design with superior clean-ability & scratch resistance
